34293 Montpellier, France

Montpellier, le 11 Mars 2024

**A postdoc position is available at the team Structural Bioinformatics and Molecular Modelling, CRBM, UMR 5237, Montpellier, France**

We are seeking a computer scientist with experience in bioinformatics and solid programming skills; knowledge in 3D protein structures and statistical learning would be a plus. Our project aims at the development and integration of bioinformatics tools for an interdisciplinary project dealing with protein aggregation. We plan to hire a young postdoc (typically less than 2 years after PhD defense). This position is open for up to 2.5 years and funded by FRM project “Interdisciplinary approach to understand the mechanisms of Alzheimer disease induced by viral infections”. The researcher will benefit from an exceptional environment thanks to the presence of numerous leading international researchers. Montpellier is a nice city located in the South of France, just next to the French Mediterranean coast. It is a high-tech center with a range of specializations including but not limited to biology, health, agriculture, and information technology.
